

The PATROLLEUR 44 MX is a work system for the alpine area and the skipatrol as well as for paramedics in alpine rescue operations with the "Multipointfix - System" for flexible and versatile attachment option for additional equipment.

- Main compartement with adaptable modular system.
- Safety compartement for alpine safety equipement such as avalanche shovel, probe and biwisac
- Small front pocket for little parts.
- Anatomically cut shoulder straps and chest strap with emergency whistle.
- Hipbelt, 38mm wide.
- **IKS** Individual labeling system
- Robust carrying handle, stable enough to hang the backpack on a winch.
- Reflectors for better visibility.
- Compartement integrated in the bottom for an optionally available stowable bag for a helmet or defibrillator and an optionally available rain cover
- New "Multipointfix-System" with 8 fixed points on the backpack, in order to attach various equipment to the backpack.
- 2 simple, solid fixations for a ice axe.
- Strong fixations for skis.
