

With the diversity of today's organizations and the number different rescue operations, it is becoming more and more important to personalize and label products. With our **IKS** (Individual Labeling System), this is very easy and quick.

- The Changeable front:** A whole area on the front of the Docsnake and Viper was designed to be interchangeable. A logo, photo or written identification can be created very easily with digital printing and can be inserted into the backpack with Velcro. The digital print is laminated for better protection and for hygienic reasons. A pdf or jpg file with a quality of at least 1000 dpi is required as a template.
- Description labels / slide-in labels:** A name, a description or an identification can be inserted into the already prepared slide-in window on the backpack. It can be created very easily and also on your own printer.

The IKS offers the possibility of customer-specific labeling and identification of any kind.

Item	add-on	Description	Model	Item no.	Base colour	Printing area
Changeable front Docsnake 48	with slide-in window	Description acc. to customer requirements	Docsnake 48	1713001	white	18 (25,5) x 18 cm*
